

Go Green With Antec!

Don't Compromise – Save Energy and Maximize Performance!

About 80 PLUS®

As graphics cards and processors become increasingly powerful, the costs of running a desktop computer are rising rapidly; today's computers drain more electricity than ever. When building a system, it's important to consider not just the energy it uses, but the efficiency with which it runs. Conserving energy is important for us at Antec, and that's why many of our products now meet 80 PLUS, the highest independently certified standard in energy efficiency.

What is 80 PLUS certification? 80 PLUS is an innovative, electric-utility-funded incentive program to integrate more energy-efficient power supplies into desktop computers and servers. Whereas most current PSUs are only 60 to 70 percent efficient, wasting up to 30 to 40 percent of the energy they consume, 80 PLUS certified PSUs have been tested and guaranteed to operate at 80 or more percent efficiency; an 80 PLUS compliant PSU can save 21 percent of total electricity use across all modes of operation. Not only will this lower your operating costs, it's also incredibly beneficial for the environment. In fact, as of July 20, 2007, ENERGY STAR® Computer Specifications includes 80 PLUS power supply efficiency levels!

You might think that energy efficiency comes at the cost of reduced power, but with Antec products, that couldn't be further from the truth. Despite their incredible efficiency, Antec power supplies provide maximum power with no reduction in excellent performance! So whether you're thinking about replacing an old power supply or building a new high-performance system, remember that it's not just the cost of the power supply that matters, it's the total cost of ownership. In addition, system integrators who utilize 80 PLUS compliant products are eligible for monetary returns and other benefits as part of the 80 PLUS Channel Partner Benefits program. If you want components that deliver power, reduce noise, and conserve electricity, make sure they're Antec 80 PLUS units!

Antec
The Power of You

Power Supplies

EarthWatts

The Antec **EarthWatts** line offers some of the most environmentally friendly power supplies available. With universal input, Active PFC, and a robust cooling system, **EarthWatts** is everything you could want in an energy-efficient power supply. Available in 380, 430, 500, and 650 Watts.

TruePower Quattro

Today's high-end systems can demand a lot of power. The Antec **TruePower Quattro** delivers up to 1000 Watts of pure power, and its four 12V rails offer up to 85% efficiency! **The TruePower Quattro** features universal input, active PFC, and a stylish racing stripe paint job. Available in 850 or 1000 Watts.

Cases

Sonata Family

The **Sonata III 500** and the **Sonata Designer 500** offer users the ultimate in Quiet Computing. These cases boast High Definition front audio ports, the latest Quiet Computing technologies, and a high-efficiency 500 Watt EarthWatts power supply.

Veris

For the home theater enthusiast, the Veris line offers the perfect enclosures for your media center PC. With bright displays, thin elegant frames, and high efficiency 80 PLUS® power supplies, the **Microfusion 350**, **Fusion 430** and the **Fusion 430 Black** enable the ideal media appreciation experience.

The New Solution Series

From the compact and stylish **NSK1380** to the unbeatable mid tower **NSK6580**, the Antec New Solution series integrates sleek design and robust performance. Every New Solution case is powered by an 80 PLUS® certified power supply. No matter what your needs are, the New Solution series offers the perfect solution.
